### **Wave Arts Plugs into MAS, Strengthens Mac Offerings**

ARLINGTON, MA – FEBRUARY 20, 2003 – Wave Arts has expanded its critically acclaimed line of pro audio plug-ins to MOTU's MAS platform, adding support for musicians and engineers who use Digital Performer and AudioDesk.

The newest batch of MAS plug-ins include: the powerful yet CPU-efficient MasterVerb reverb; the all-in-one TrackPlug channel strip plug-in with a compressor, gate and a 64-bit 10-band EQ; and the WaveSurround Pro spatial enhancer/wide reverb plug-in.

"We're very proud to join the MOTU community," notes Bill Gardner, Wave Arts' President. "MAS is a great platform and we're excited to be developing for it."

In addition to MAS support, Wave Arts has also made significant improvements to its Mac-based graphics engine – its Mac VST and MAS plug-ins now offer smooth and fast graphics controls, with vastly improved GUI refresh rates.

Free 30-day demo downloads of MasterVerb, TrackPlug and WaveSurround Pro for MAS, as well as Mac/PC VST and DirectX, are available from Wave Arts' website, [www.wavearts.com](http://www.wavearts.com).
