FOR IMMEDIATE RELEASE:

MOTU RELEASES CLOCKWORKS SOFTWARE PUBLIC BETA FOR MAC OS X

Cambridge, MA – Wednesday, July 17, 2002 – MOTU, Inc. (www.motu.com) today released a public beta of a Mac OS X version of ClockWorks™, MOTU's control panel software for MOTU USB rack-mount MIDI interfaces. ClockWorks gives Mac OS X users of MOTU MIDI interfaces complete access to all of the programmable features in their MOTU hardware.

"By bringing ClockWorks to Mac OS X," said Jim Cooper, MOTU's Director of Marketing, "we've completed the cycle for all of our users who have moved to OS X with their MOTU MIDI hardware. This software release is the latest in our massive effort to bring MOTU's industry-leading music and audio products to Mac OS X."

ClockWorks gives users access to the many programmable features in their MOTU rack-mount MIDI interface. For example, MIDI Timepiece AV users can choose SMPTE frame rates, route and process MIDI data, choose 0.1% pull-up or pull-down sample rates for synchronizing audio to video, and edit and save presets.

The public beta of ClockWorks software is now available here under the Mac OS X download section:
