WWDC 2006, San Francisco, CA. — Monday, August 7 — MOTU today announced its flagship audio workstation software 'Digital Performer' is now available as a Universal application for Mac OS X version 10.4 'Tiger'. This means the application has been ported to work seamlessly with both Power PC and Intel-based Macs.

"Digital Performer delivers unrivaled audio workstation features, from its six included virtual instruments to its unique visual cueing features for film and TV composers," said Jim Cooper, MOTU's Vice President of Marketing. "By bringing DP to the Intel Mac, we can maintain Digital Performer's leading role in audio workstation technology."

"The blazing speed of our Intel-based Macs provides a significant performance boost to all Universal applications running natively," said Ron Okamoto, Apple's vice president of Worldwide Developer Relations. "We're thrilled MOTU is now shipping a Universal version of Digital Performer so audio professionals can take advantage of the excellent performance of Intel-based Macs."

Digital Performer 5.1 is now available as a free download at motu.com for registered Version 5.0 users. This maintenance update, provided as a Universal application, can be installed on any Intel-based or Power PC Mac and provides numerous code enhancements and optimizations.
