Cambridge, MA - Wednesday, July 17, 2002 - MOTU, Inc. (www.motu.com) announced today that Digital Performer, MOTU's flagship audio workstation software, is coming to Mac OS X.

"As a Mac-only application, Digital Performer has delivered many break-through features to Mac musicians and recording artists, such as sub-millisecond MIDI timing accuracy and fully symmetric multi-processor support," said Jim Cooper, MOTU's Director of Marketing. "Mac OS X offers MOTU unprecedented opportunity to continue Digital Performer's leading role in Macintosh music and audio innovation."

"Mac OS X Core Audio integrates audio functions directly into the operating system in ways never before possible, making Mac OS X an incredibly advanced operating system for professional audio," said Ron Okamoto, Apple's vice president of Worldwide Developer Relations. "The success of Mac OS X with the professional audio community is dependent upon the support of great developers, and we're thrilled to see MOTU bringing such an important application like Digital Performer to Mac OS X."

The Mac OS X version of Digital Performer is expected to ship during the second half of 2002.
