FOR IMMEDIATE RELEASE:

MOTU AND ROCKET NETWORK ANNOUNCE DEVELOPMENT PARTNERSHIP

NAMM, ANAHEIM, CA - January 18, 2001. MOTU, Inc. (www.motu.com), the leading developer of music and audio recording technology for personal computers, announced today that they have signed a software development agreement with Rocket Network, the leading infrastructure provider for the world's first global on-line production network.

Under the terms of this agreement, MOTU will develop RocketPower versions of Digital Performer MIDI sequencer and audio workstation software, which will give Digital Performer users access to Rocket's global Production Network. Together, Digital Performer and the Rocket Network will then give Digital Performer users the ability to collaborate with colleagues around the globe, 24/7 access to their projects, archiving and storage services, and additional features which streamline the production process of audio professionals.

Jim Cooper, Director of Marketing at MOTU added "When you look at the whole MOTU picture - innovative software, ground-breaking hardware and industry-wide compatibility - MOTU has developed the most complete, advanced system currently available for computer-based music production. We view our collaboration with Rocket Network, the new leading internet-based audio production provider, as an essential element of our ongoing commitment to Digital Performer users to support significant emerging audio industry technologies. "

Pam Miller, President and CEO of Rocket Network said, "We are delighted that MOTU will be adding RocketPower to their extremely popular audio products. For us this partnership affirms the ubiquity of our Global Production infrastructure. Rocket Network's service is the audio industry standard for local and world wide

collaboration, and we are excited that these capabilities will also be available to MOTU's professional customers."

The RocketPower version of Digital Performer is expected to be available later in 2001.

About Rocket Network

Rocket Network is an infrastructure provider enabling a worldwide network of collaboration spaces for audio production and session management. Rocket Network has become the industry standard global production network through development and resale partnerships with leading audio companies.

Users of "Rocket Power" applications have around the clock access to their creative projects, regardless of location, as well as the ability to collaborate with colleagues in-house, or other audio professionals around the world. Rocket Network's Central Server system provides a seamless data bridge between audio products, allowing multiple applications to be used on a single session at the same time.

Users also have access to online storage and archiving, a global talent pool, and other Rocket Network features and services that simplify their work process. Rocket technology is used during the creation and production of feature film, TV and radio soundtracks, music recordings and website soundtracks.
