FOR IMMEDIATE RELEASE

MOTU PCIe-424 IS NOW SHIPPING

Print-ready and web-ready product images are here:

CAMBRIDGE, MA – Monday, March 6, 2006. A new PCIe (PCI Express) version of the PCI-424 card is now shipping, allowing users of MOTU's flagship PCI-based recording system for Mac and PC to take full advantage of today's fastest PCIe-equipped Macs and PCs. PCI Express is the latest high-speed expansion slot technology found in many high-performance PC desktops and the latest generation Power Mac G5 towers from Apple.

Availability

The new PCIe-424 card is now available for purchase as part of a 2408mk3, HD192 or 24I/O core system from authorized MOTU resellers. Customers can specifically ask for the PCIe (PCI Express) version of the 424 core system they would like to purchase.

MOTU users who currently own a PCI-324 or 424 core system and wish to purchase a PCIe-424 card to run their core system on a PCIe-equipped computer can order the PCIe-424 card directly from the "Upgrades" tab at motu.com.

The earlier PCI-X (3.3 volt) version of the PCI-424 card is also still available for purchase from the "Upgrades" tab at motu.com. This card is suitable for older computers that have 3.3-volt PCI-X slots.

Massive I/O performance

Both PCI-X and PCI Express 424 core systems deliver incredible I/O performance. On today's fastest PCs and Macs, a fully-equipped PCI-424 core system (with four 24-channel 424 interfaces) can deliver 96 simultaneous channels of both input and output at sample rates up to 96kHz. A core system equipped with four HD192 interfaces can deliver an astonishing 48 channels of both input and output at 192kHz. No other PCI system gives you this much audio I/O from a single PCI card.

All I/O channels operate as a unified mix matrix under the PCI-424 card’s powerful CueMix DSP mixing engine.
